## Assessment Data and Math Department Success Elements

Waterford High School, California

**Topic:** Turning Around Chronically Low-Performing Schools

**Practice:** Focus on Instruction

Benchmark data, like that included here, is analyzed by Waterford High School math teachers collaboratively to determine strengths and weaknesses in student learning. While a benchmark has summative elements, teachers are also able to use the data as a formative assessment to inform instruction. Based on the data, teachers decide to reteach specific skills or standards with low student mastery levels. Teachers are also able to compare student performance for their own students with the overall data and to share techniques for teaching specific concepts. Schools can develop similar tools using their school/district/state benchmarks for the columns and using the data to determine which skills to reteach.
